## Web Development

---

E.I.T is Kolkata based Web Development Company located in India. Web Design and Development is fast developing industry all over world , as this is the scenario we are specialized in making the web based project more effective and easy guiding tool, the major aspect is that we make all this very cost effective.

E.I.T custom Web applications and software across a wide range of technology platforms to ensure successful implementation of your business strategies and enhancement of your operational excellence. As every client faces unique business challenges, our Web application development team starts with a thorough understanding of your objectives and works with you in close collaboration to come up with the most appropriate solutions that are rapidly architecture, developed, tested and implemented. For Team Olive, every project is mission-critical and must be delivered - on time and within budget.

We at E.I.T. understand that custom Web application development is not a one-off task. We employ leading-edge technologies so that need-based Web applications and technology solutions may have longer shelf-life and evolve with your business. These will need minimum maintenance/support and generate business value, so that we remain your partner of choice for custom Web applications development and smart business moves.

E.I.T has strong international presence, providing global development advantage (GDA) and ensuring 24-hour development cycle encompassing onsite, offsite, and offshore mediums of work. From custom Web applications to inter-active business automation tools - our industry-specific and business-centric technology solutions are delivered across the globe so that you may: -

Develop and market products and services more efficiently

Reduce administrative and other costs

Provide better customer service & add convenience for business partners and employees

Get higher Return on Investment (ROI)

## Corporate Training

There is an increasing need in the IT industry to make employees job- ready in terms of development utilization. The IT industry specifically looks at providing specific skill-sets on project-related applications. Moreover apart from the IT industry, every sector is deploying some kind of IT tools or solutions to make their business processes easy, transparent and accessible within the organization. At tsap (E.I.T) Training Solutions, we offer end-to-end customized training packages and services - like assessment of training needs/requirements, planning, advisory and consultative services. We excel in the supply of specialist, niche and mainstream technical skills.

Finished school this is a new concept, before established this school we study the market and find the in year there are so many people are passed out from technical collage in different faculties like B.Tech, MCA, M.tech etc. But when they go to faced the industry they are not able enter that world because (according to our study) now a days industry is moving with that type of technology which is not covered in there syllabus, so they are lacking in technology. That why day by day manpower cost is decreasing which is a very alarming situation. So try to develop them in such way that they are ready for the industry (like a readymade product.)

In our school we cover that type of technology which is frequent used in industry and give them a test of real world. We realize that the growing technology services sector in India would require not only top-of-the-line technologically savvy professionals but also business enablers with requisite people and business skills. We innovated the highly successful E.I.T Knowledge Finishing School framework with the 'Talent Transformation Engine (T2E)' at its core. The 'Talent Transformation Engine' has been developed based on years of live industry research and the uniquely different pedagogy has been used to bring significant business value to IT and ITES corporations, in India, for their high-end domain, technology, management and work skills training needs.

1 . **Knowledge Finish School:** The KFS System TM has been conceptualized and developed as an industry insider's approach and answer to creating institutions that bridges the gap between 'industry' and 'academia' while creating 'employable' human resources from both engineering/science and general streams.

As an 'out-of-the-box' solution the KFS system TM, has at its core the 'Talent Transformation Engine (T2E)' with its own pedagogy, knowledge dissemination methods and processes and assessment systems backed by a dedicated research and development team that constantly improves and updates the system based on evolving industry needs. T2E, as a pedagogical style, has been conceptualized and developed to achieve, among others, the following major outcomes:

- a. Optimum knowledge acquisition.
- b. Ability to apply knowledge in a live environment.
- c. All round holistic development of an individual mapped to critical 'employability' skills.
- d. Performance orientation.

2. **Software Finishing School:** E.I.T, to its credit, will be the first and only organization in Tripura to realize that the growing Indian software services market, if it were to retain its fast-paced growth momentum, would require to build human capital that are not only technologically savvy but also professionally groomed in managerial and business skills. With its unique foresight it foresaw the role of future software project leaders and managers transiting from being pure technology leads to business enablers. The pedagogy, followed at the Software Finishing School, is a unique amalgamation of cutting-edge technology and management modules in a single curriculum.

3 . **Corporate Training:** E.I.T will extended its Software Finishing School framework to help corporate train their fresh engineer recruits and experienced professionals. We hope E.I.T will be among the largest training providers for entry-level engineers for clients such as IBM, Tech Mahindra, Wipro, Sky-tech

E.I.T offers a wide range of training competencies spanning across technologies including, but not limited to, databases, application programming, software engineering, hardware, legacy systems and languages, mainframe technologies etc. All entry-level training programs are designed and developed in close consultation with the client and focused on the project(s) where the new recruits would be deployed post their induction training. Training curriculum development includes preparation of presentations and handouts, test papers, project cases etc. Apart from technology skills entry-level training programs also include critical soft skills trainings including, among others, communication skills, presentation skills, cross culture etiquettes etc.
